

## **INTERNSHIP OPPORTUNITIES**

### **Our Vision**

Through groundbreaking, transdisciplinary discovery and outreach, the North Carolina State University *Plants for Human Health Institute*, located at the N.C. Research Campus in Kannapolis, will pioneer a dramatic shift in the way the American public views and uses plant food crops, not merely as a source of nutrients and flavorful calories, but as a powerful resource for components that protect and enhance human health. Integrated research in metabolomics, biochemistry, pharmacogenomics, breeding and postharvest attributes will lead to the development of mainstream fruits and vegetables with enhanced health benefits, and the introduction of new or underappreciated crops and products. This will allow consumers to make proactive, responsible dietary choices that benefit their own, and their families', health.

The Plants for Human Health Institute (PHHI) is an interdisciplinary program in the College of Agriculture and Life Sciences at N.C. State that offers research emphasis from multiple departments based on our main campus. The departments include, but are not limited to:

- [Food, Bioprocessing and Nutrition Sciences](#)
- [Horticultural Science](#)
- [Plant Pathology](#)
- [Genetics](#)
- [Plant Biology](#)

If you are interested in a semester or year-round internship with PHHI, please fill out the online application at <http://jobs.ncsu.edu/> (Position Number: 11SDNYRNP) and attach a cover letter, resume and a reference letter from a faculty member in support of your application.
